PRODUCTS AND SERVICES

Core Safran capabilities for the U.S. market include a broad range of advanced products and services that span the aerospace, defense and security sectors.

Safran's core capabilities for the U.S. market include offerings in three primary fields: aerospace, defense and security – all of which benefit from the global organization's continued emphasis on innovation and complete customer satisfaction.

As a top-level supplier and service provider in the U.S., Safran supports an expanding American customer base that includes government agencies, military services, law enforcement, private sector companies and more.

The company's aerospace offerings include the production and support of propulsion systems for aviation and space; as well as such aircraft equipment as landing gear, onboard information systems and wiring solutions.

For the U.S. defense sector, Safran provides a wide range of advanced technologies that support and enhance American military operations – including turbine turboshaft engines; landing systems for fixed- and rotary-wing aircraft; avionics systems and observation/location solutions.

Safran security solutions – which are provided to government and civilian customers across several markets – consist of multi-biometric technologies for fingerprint, iris and facial recognition; detection systems for explosives, narcotics and chemical, biological, radiological and nuclear material, and more.
